

National Institute of Technology Kurukshetra

Department of Computer Engineering

Programming using Python (CSIC-104)

Branch: RA (II Semester)

Mid Term- II

Date of Exam – 7-April-2026

Time- 09:00 AM-09:50 AM [50 min]

Max Marks:15

Q 1)	Given a tuple of integers, write a program to find all unique pairs of elements whose sum is equal to a given target value. Example: Input: (2, 4, 3, 5, 7) Target: 7 Output: [(2,5), (4,3)]	[5]
Q 2)	Write a Python program to simulate a basic banking system using object-oriented programming principles. Implement classes for Bank_account, Customer, and Transactions (deposit, withdrawal). Also include error handling for invalid transactions.	[5]
Q 3)	Write a function to convert a number entered by the user into its corresponding number in words. For example, if the input is 876 then the output should be 'Eight Seven Six'	[5]
