

Subject – DCM, Time: 50 min, MM: 15, Date: February 20, 2026, Sem : 4th
Note: **Attempt any three questions**

1. What is Armature Reaction? Explain the effect of armature reaction with diagram.
How the effect of armature reaction can be minimized explain?
2. What is Commutation? Explain with the help of diagram and mathematical equations.
Also explain what is resistance commutation, linear commutation, delayed commutation & voltage commutation?
3. What are the different methods for the speed control of DC Motor? Also explain Ward Leonard speed control method?
4. Why there is need of a Starter for DC Motor? Explain 3-Point starter and its working along with its limitations. How these limitations can be corrected with the help of 4-Point starter?
