

Operations Research (Test - II)

Note: Attempt any **one** question. All steps and computations must be clearly visible.

Q 1. Solve the given transportation model where the data contains cost values and use North-West Corner method for Basic feasible Solution.

	E	F	G	H	J		Supply
A	8	10	12	17	15	100	
B	15	13	18	11	9	150	
C	14	20	6	10	13	180	
D	13	19	7	6	12	280	
Demand	90	170	50	210	190	710	

Q 2. Consider the following transportation model with cost values.

	1	2	3	4	5	Supply
A	4	3	1	2	7	80
B	5	2	3	4	5	60
C	3	5	6	3	2	40
D	2	4	4	5	3	20
Demand	60	60	30	40	10	200

As per the current allocation: $A \rightarrow 1 = 40$, $A \rightarrow 2 = 30$
 $A \rightarrow 4 = 10$, $B \rightarrow 2 = 30$
 $B \rightarrow 3 = 30$, $C \rightarrow 4 = 30$
 $C \rightarrow 5 = 10$, $D \rightarrow 1 = 20$

Check if the current allocation is optimal. If not, then perform iterations to get it optimized.
